

Example Routines

The following pdf will contain example routines using the BP SBL format of selecting exercises first > and then fitting them into the recommended training splits. It will also contain “special routines” like the isolations-only Anterior Posterior split variation, minimalist/home gym routines, as well the neck training routine I recommend and use.

Example Routines (Recommended Splits)

These are the example routines based on the 3 recommended splits: torso and limbs, anterior posterior, and fullbody.

Exercise selection

Muscle Group	Exercise A	Exercise B
Chest	Reverse grip smith bench	Pec deck
Shoulder	Cable lateral raise	Machine shoulder press
Lats	Wide grip weighted pull ups	One arm dumbbell row
Traps	Chest supported wide row machine	Tbar kelso shrug
Biceps	Seated dumbbell curl	Ez bar preacher curl
Triceps	Vbar pressdown	Dumbbell pullover
Forearms	Dumbbell wrist curl off bench	Dumbbell reverse curl
Abs	Decline situp	Standing cable crunch
Legs	Leg curl + hack squat	SLDL + leg extension

*Review “Exercise Selection” video and pdf for how to synergize your exercise choices.

Priority order: Shoulder > traps > lats > biceps > abs

Routine 1 – Torso and Limbs

Torso Day A:

Cable lateral raise 2x4~8

Chest supported machine wide row 2x4~8

Wide grip weighted pull ups 2x4~8

Decline situp 2x4~8

Reverse grip smith bench 2x4~8

Limbs Day A:

Seated dumbbell curl 2x4~8

Vbar pressdown 2x4~8

Dumbbell wrist curl off bench 2x4~8

Leg curl 2x4~8

Hack squat 2x4~8

Torso Day B:

Machine shoulder press 2x4~8

Tbar kelso shrug 2x4~8

One arm dumbbell row 2x4~8

Standing cable crunch 2x4~8

Pec deck 2x4~8

Limbs Day B:

Ezbar preacher curl 2x4~8

Dumbbell pullover 2x4~8

Dumbbell reverse curl 2x4~8

SLDL 2x4~8

Leg extension 2x4~8

*Ab exercise can go on torso or limbs day, you can also add calves on limbs day if you want to train it.

Routine 2 – Anterior Posterior**Anterior Day A:**

Cable lateral raise 2x4~8

Decline situp 2x4~8

Reverse grip smith bench 2x4~8

Vbar pressdown 2x4~8

Leg extension 2x4~8

Hip adduction machine 2x4~8

Posterior Day A:

Chest supported wide row machine 2x4~8

Wide grip weighted pullups 2x4~8

Seated dumbbell curl 2x4~8

Dumbbell wrist curl 2x4~8

Leg curl 2x4~8

Banded back extension (glutes) 2x4~8

Anterior Day B:

Machine shoulder press 2x4~8

Standing cable crunch 2x4~8

Pec deck 2x4~8

Dumbbell pullover 2x4~8

Leg extension 2x4~8

Hip adduction machine 2x4~8

Posterior Day B:

Tbar kelso shrug 2x4~8

One arm dumbbell row 2x4~8

Ez bar preacher curl 2x4~8

Dumbbell reverse curl 2x4~8

Leg curl 2x4~8

Banded back extension (glutes) 2x4~8

*Like the Torso and Limbs split, the ab exercise can go on either Anterior or Posterior day. As you can see in this routine, the **legs** portion of the Anterior Posterior split is the same 4 exercise constant throughout, glute alternatives to the banded back extension include: RDL, hip thrusts, horizontal GHD extensions.

Routine 3 – Fullbody

Fullbody A:

Cable lateral raise 1x4~8

Chest supported machine wide row 1x4~8

Wide grip weighted pull ups 1x4~8

Seated dumbbell curl 1x4~8

Decline situps 1x4~8

Reverse grip smith bench 1x4~8

Vbar pressdown 1x4~8

Dumbbell wrist curl 1x4~8

Leg curl 1x4~8

Hack squat 1x4~8

Fullbody B:

Machine Shoulder press 1x4~8

Tbar kelso shrug 1x4~8

One arm dumbbell row 1x4~8

Ez bar preacher curl 1x4~8

Standing cable crunch 1x4~8

Pec deck 1x4~8

Dumbbell pullover 1x4~8

Dumbbell reverse 1x4~8

SLDL 1x4~8

Leg extension 1x4~8

*you can do this 2x/week, 3x/week, or every-other-day.

Special Routines

Isolations-only Anterior Posterior Variation

The Anterior Posterior split is the best split for training with isolation exercises only, here's what it might look like.

Anterior Day:

Pec deck 2x4~8

Cable lateral raise 2x4~8

Tricep pressdown 2x4~8

Front raise (any) 2x4~8

Leg extension 2x4~8

Adductor machine 2x4~8

Posterior Day:

Keenan flap/Cable pullover 2x4~8

Kelso shrug 2x4~8

Rear delt fly machine 2x4~8

Cable curl 2x4~8

Leg curl 2x4~8

Banded back extension / Hip thrust 2x4~8

*An ab or calf exercise can be added on either day. Repeat the same Anterior and Posterior day.

Minimalist/home-gym routine

This routine is for people with limited equipment with home gyms. It's not going to be as "optimal" as having access to complete equipment (cables, pec deck machine, smith, etc.) but it is definitely still effective.

This is assuming you only have a barbell, flat bench, maybe a pull up bar.

Muscle Group	Exercise A	Exercise B
Chest	Reverse grip bench press	Wide grip bench press
Shoulder	Upright row (side delts)	Behind the neck press seated
Lats	Wide grip weighted pull ups	Supinated grip bent row (lats)
Traps	Wide grip bent row (traps)	Wide grip bent row (traps)
Biceps	Barbell curl	Barbell curl
Triceps	Skull crusher (or banded pressdown)	Skull crusher
Forearms	Barbell wrist curl off bench	Barbell reverse curl
Abs	Weighted sit up (eg. under couch)	Weighted sit up (eg. under couch)
Legs	Nordic curl + Squat	SLDL + sissy squat

*As you can see, some of the exercises are repeated for A and B due to limited equipment. If you have a bench with a leg curl/extension definitely use those instead of the nordic curl/sissy squats, and use a band assisted nordic curl too if you can.

From this selection of limited exercises, the same 3 main splits (TorsoLimbs, AnteriorPosterior, FullBody) can easily be arranged. Here's an example of Torso and Limbs

Torso Day A:

Reverse grip bench press 2x4~8

Upright row 2x4~8

Wide grip weighted pull ups 2x4~8

Wide grip bent row (traps) 2x4~8

Weighted situp 2x4~8

Limbs Day A:

Barbell curl 2x4~8

Skull crusher 2x4~8

Barbell wrist curl off bench 2x4~8

Nordic curl 2x4~8 (band assisted)

Squats 2x4~8

*repeat for the B side

Neck Training routine

You can easily train your neck at the gym with a towel using plate curls and extensions (eg. 3x10~15 superset eat), but I recommend this faster and more convenient routine that you can do at home.

Equipment

Get a neck harness, I use the Dmoose one off Amazon.

Also get some basic resistance bands, if you harness already comes with resistance bands you can skip this step. I use the basic rubber band type like this, all you have to do is remove the chain from the carabiner and clip them on either ends of the band.

The method

Basically, instead of having to fiddle around with some weight plates for our neck curls and extensions (which can be a huge pain in the ass), we're going to use resistance bands for our neck extensions (hold in front like this) and curls (just hold the bands behind your back and do neck curls). This method is way easier to setup and way faster to do since we don't have to load plates, we can also adjust the resistance by how we hold the bands.

All around this is just the superior method for using the neck harness IMO.

The routine itself is pretty simple, do a warm up of 20 reps of curls and extensions (hold the band closer so there's less resistance in the warm up), then just do 3 rounds of curls and extensions. If it gets too easy just go to the next heavier band.

The routine:

Band neck curl 10~15

Band neck extension 10~15

Rest 90s and repeat for 3 rounds.

Repeat this routine 2~3 times a week and the neck will grow very quickly.
